EDUCATION

Carnegie Mellon University | Pittsburgh, PA

B.S. in Information Systems | Expected May 2029 | GPA: 3.77/4.00

Relevant coursework: Introduction to Data Structures; Database Design and Development (both in progress); The Information Systems Milieux; Information Assurance and Security

SKILLS

Languages: Java, Python, Go, JavaScript, SQL, HTML, CSS

Tools and libraries: Git, GitHub, Docker, jQuery, Leaflet

Additional language: Spanish (fluent)

PROJECTS

Precipitation Forecast | Independent Project | Go

- Built a Go web app that uses National Weather Service APIs to show precipitation forecasts for a location.
- Organized location lookup and forecast requests into separate functions; decoded JSON into Go structs for use in the app.
- Handled missing forecast values and added request timeouts so the app would not wait indefinitely for a response.

Restaurant Systems Proposal | Team Course Project | Spring 2026

- Worked with three classmates to propose a tool that combines restaurant sales, ingredient costs, and preparation information to support menu decisions.
- Built a website in HTML, CSS, and JavaScript to explain the team's proposal through a process diagram and sample report.

MonoMuse | Web Development Course Project

- Developed a museum website with connected exhibition, ticket selection, and checkout pages using HTML, CSS, and JavaScript.
- Added form validation, an image gallery, and an interactive Leaflet map; kept navigation consistent across the site.

SELECTED COURSEWORK AND LABS

- Java: completed parts of a Shut the Box game, using arrays and methods to handle dice rolls and update box states after player choices.
- SQL: use joins, subqueries, and aggregate functions to combine tables and summarize data in course assignments.
- Security: used Nmap, Nessus, Metasploit, and Burp Suite to find and test vulnerabilities in controlled course labs.
